Unit Converter

All features · Free Windows app by Digital Arts

What it does

- **Always one click away**: lives in the taskbar corner next to the clock and opens just above the taskbar.
- **Ctrl + Alt + U** opens it from any program; Esc or a click outside hides it.
- **11 categories, 95+ units**, including Indian units like tola and quintal, and kWh (electricity unit).
- **See every unit at once**: the table shows your value in all units of the category.
- **Convert both ways**: type in either box. Swap units with ⇄ or Ctrl + S.
- **Exact numbers** to 10 significant digits, no confusing “E” notation.
- **Double-click to copy** any value; click a row to convert to that unit.
- **Remembers** your last category, units and value.
- **Starts with Windows** (your choice) so it is always ready.
- **Works offline**, very small (about 60 KB), no ads, no sign-in, nothing sent over the internet.
- Pin button keeps the panel open while you work. Works with the taskbar at the bottom, top or side.
- **Free** for home, office and shop use.

Categories and units

Category	Units
Length	mm, cm, metre, km, inch, foot, yard, mile, nautical mile, print point, pixel @96 DPI
