Installation Guide

DA Print – website + DA Print Desk for Windows 10 / 11 · about 10 minutes · by Digital Arts

DA Print has two parts: the **web dashboard** at print.datpl.com (your shop, prices, orders) and **DA Print Desk**, a small Windows app on the computer connected to your printers that prints accepted orders by itself.

What you need

Item	Requirement
Computer	Windows 10 or 11 (64-bit or 32-bit) connected to your printer(s)
Printers	Any printer that prints from Windows – one printer is enough
Word / Excel / PowerPoint files	Microsoft Office or the free LibreOffice installed on the same computer (PDF and photos need nothing)
Internet	Always on while the shop is open
Phone (optional)	To open the dashboard on the go

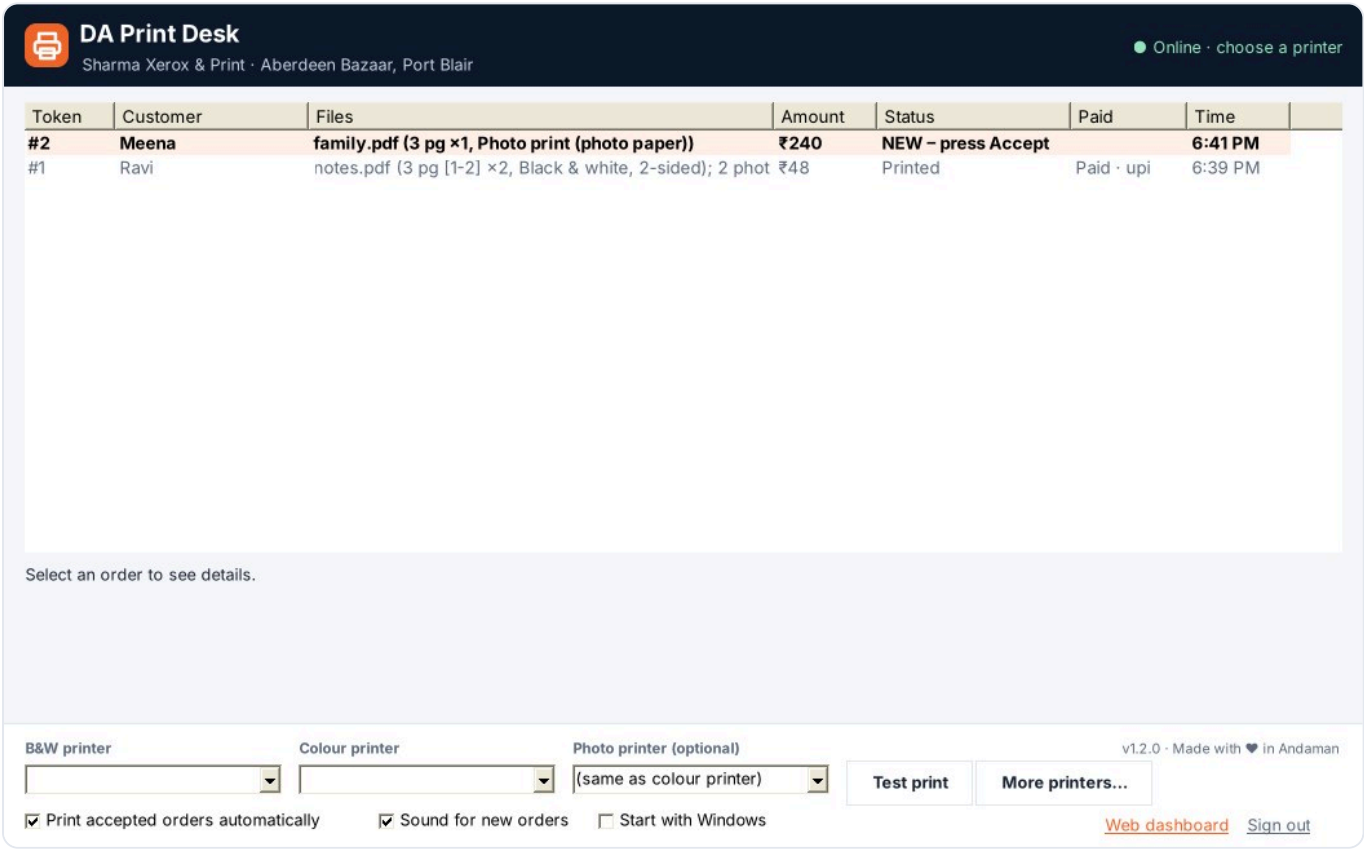

Part A – Create your shop (website)

1. Open **print.datpl.com/dashboard** and click `New shop? Create an account`. Enter your email and a password (8+ letters) and confirm the email you receive.
   Already have a Digital Arts login (store, DA Pass)? Just **Sign in** with it – use "Forgot password?" if needed.
2. In **Add your shop** type the shop name, area and phone, then `Create shop`. Your 15-day free trial starts.
3. Open `⚙️ Settings`:
   - **Print types & prices** – e.g. Black & white ₹5, Colour ₹15, Photo print (photo paper) ₹80. Use `+ Add print type` for more. "Printer" says which printer the desk app uses.
   - **UPI ID** – customers then see a UPI button with the exact amount.
   - **Keep customer files** – 2 hours to 7 days, and a **notice** for customers.

   Click `Save settings`.
4. Open `🔗 QR & poster` → `Print A4 poster`. Put it on the counter where customers can scan it.
5. On the `🧾 Orders` page click `🔔 Turn on order alerts` so a new order rings even in the dashboard.

Part B – Install DA Print Desk (Windows)

1. **Download.** Open **print.datpl.com/download** (or Dashboard → Desk app) and click Download DA Print Desk. You get a ZIP file of about 8 MB.
2. **Unzip.** Right-click the ZIP → Extract All... → choose e.g. `Documents\DA Print Desk`. Keep the whole folder together – `DAPrintDesk.exe` needs the `x64` and `x86` folders next to it.
3. **Run.** Double-click `DAPrintDesk.exe`. No installation. If a blue **"Windows protected your PC"** screen appears, click More info → Run anyway (normal for new software without a paid certificate).
4. **Sign in** with the same email and password as the dashboard. The app remembers you.
5. **Choose printers** at the bottom: **B&W printer**, **Colour printer** and (optional) **Photo printer**. Click Test print – a test page should come out.
6. **More printers...** lets you pick a printer for every print type. Tick **Ask first (load paper)** for photo paper if you have only one printer.
7. **Optional:** tick **Start with Windows** so it opens every morning by itself.

Only one printer? Choose it as the B&W printer and leave the others empty – everything prints there. Colour orders still print in colour if the printer is a colour printer.

Updates: when a new version is ready the app shows **"Update available"**. Click Yes, then Exit the app (right-click the printer icon near the clock → Exit), replace the folder and open it again. Sign-in and printers stay saved.

Part C – Daily use

1. Keep **DA Print Desk** running (closing the window keeps it next to the clock).
2. A new order shows a **pop-up with a chime**. Click `Accept & print` – or turn on **Auto-accept** in Settings.
3. When the customer pays, click `Paid cash` or `Paid UPI`.
4. Need another copy? `Print again` works while the files are still kept.
5. Closing for lunch? Switch off **Taking orders** on the Orders page.

If something goes wrong

Problem	What to do
Windows Security removes or blocks the app	Windows Security → Virus & threat protection → Protection history → choose DAPrintDesk → **Allow on device**. Download only from print.datpl.com.
"pdfium.dll is missing"	Unzip the **whole** folder, not only the .exe.
"Printer not found" / nothing prints	Check the printer is on and set correctly at the bottom of the app; press **Test print**. Then press **Retry print** on the order.
Word / Excel files fail	Install Microsoft Office or the free LibreOffice on this computer.
No sound for new orders	Tick "Sound for new orders" in the app; check the PC volume. In the dashboard click "Turn on order alerts" once.
Customers see "not taking orders"	Switch on **Taking orders**, or renew your plan (Dashboard → Plan).
"Shop not found" after scanning	Print the poster again from Dashboard → QR & poster.

Privacy: customer files are private to your shop and deleted automatically after the time chosen in Settings and by the customer. Please don't copy customer files to other places.
